

Electric Brake Controls

Redline offers a complete line of electric trailer brake controllers. All are time based, with gradual trailer brake application. Full brake actuation comes in 2 to 2.8 seconds, depending on the controller.

TA900A

The TA900A controller has a multi-color LED light which indicates completed circuit, brake actuation, and brake wire shorts. Full brake actuation in 2 seconds; for 1-3 axle applications.

TA1000

The TA1000 has a two colored LED light which indicates a completed circuit and brake actuation. Full brake actuation in 2.5 seconds; for 1-2 axle applications.

TA1100

The TA1100 utilizes an LED light display which indicates a complete electrical circuit. Full brake actuation in 2.8 seconds, unless "hard" braking of tow vehicle occurs and inertia sensor overrides timer system for panic stop. For 1-2 axle applications.

TA1200

The TA1200 has a digital display showing the amount of voltage being applied to the trailer brakes. The display will also notify the user of short circuits and faulty trailer connections. Full brake actuation in 2.5 seconds; for 1-3 axle applications.
